CONTENTS

Contributors 7
Introduction. David Hurst Thomas 8
Chapter 1. Biological Interpretation and the Context for Contact.
CLARK SPENCER LARSEN 11
Abstract 11
Introduction 11
The Biocultural Context 12
The Ethnohistorical Context 15
The Archaeological Context 19
The Problem 23
Acknowledgments 24
Chapter 2. On the Eve of the Conquest: Life and Death at
Irene Mound, Georgia. MARY LUCAS POWELL 26
Abstract 26
Introduction 26
Endemic Treponematosis and Tuberculosis 27
Endemic Chronic Infectious Disease at Irene Mound 28
Implications of Precontact Infectious Disease Experience for Population Response
to Introduced Old World Pathogens 34
Acknowledgments 35
Chapter 3. The Paleodemography of Santa Catalina de Guale.
KATHERINE F. RUSSELL, INUI CHOI, AND CLARK SPENCER LARSEN 36
Abstract 36
Introduction 36
Age Determination 37
Paleodemography 40
Population Size: Santa Catalina de Guale 48
Conclusions 49
Acknowledgments 49
Chapter 4. Stress and Lifeway Change: The Evidence from Enamel Hypoplasias.
DALE L. HUTCHINSON AND CLARK SPENCER LARSEN 50
Abstract 50
Introduction 50
Background and Previous Research 50
Materials and Methods 52
Results 53
Discussion 57
Conclusions 64
Acknowledgments 65
Chapter 5. Coping with Stress: Tooth Size, Dental Defects, and Age-at-Death.
SCOTT W. SIMPSON, DALE L. HUTCHINSON, AND CLARK SPENCER LARSEN 66
Abstract 66
Introduction 66
Teeth as an Indicator of Stress 66
Materials and Methods 68
Results 68
Discussion 70
Conclusions 77
Acknowledgments 77
Chapter 6. Decrease in Diet Quality between the Prehistoric and Contact Periods.
MARGARET J. SCHOENINGER, NIKOLAAS J. VAN DER MERWE, KATHERINE MOORE,
JULIA LEE-THORP, AND CLARK SPENCER LARSEN 78

Abstract 78
Introduction 78
Dietary Context 79
Materials and Methods 81
Results 85
Discussion 88
Conclusions 92
Acknowledgments 93
Chapter 7. Postcranial Biomechanical Adaptations to Subsistence Strategy Changes on the Georgia Coast. CHRISTOPHER B. RUFF AND CLARK SPENCER LARSEN 94
Abstract 94
Introduction: Mechanical Models 94
Previous Work 96
Materials and Methods 97
Results 99
Discussion 108
Conclusions 119
Acknowledgments 120
Chapter 8. Temporal Decline in Bilateral Asymmetry of the Upper Limb on the Georgia Coast. ANNE E. FRESIA, CHRISTOPHER B. RUFF, AND CLARK SPENCER LARSEN 121
Abstract 121
Introduction 121
Materials and Methods 122
Results 124
Discussion 127
Conclusions 131
Acknowledgments 132
References 132

TABLES

2-1. Tuberculosis and Endemic Treponematosis: a Comparison of Morbid and Mortal Effects 29
3-1. Mandibular Wear Regression for Santa Catalina de Guale Preadults 39
3-2. Dental Development Schedule (in Years) for Santa Catalina de Guale 40
3-3. Adult Individuals Aged by Dental Wear from Georgia Coastal Mortuary Sites 42
3-4. Number of Individuals (D_x) and Mortality (d_x), in Age Classes, and Mean Age-at-Death ... 43
3-5. Life Table for the Precontact Preagricultural Adult Sample 43
3-6. Life Table for the Precontact Agricultural Adult Sample 44
3-7. Life Table for the Contact Santa Catalina de Guale Adult Sample 44
4-1. Dentitions from Georgia Coastal Mortuary Sites 53
4-2. Number of Teeth Examined 54
4-3. Comparative Ages of Hypoplasia Occurrence 65
5-1. Mean Tooth Breadth Comparisons for the Preadult and the Adult Cohorts from Santa Catalina de Guale 69
5-2. Percent of Preadult and Adult Santa Catalina de Guale Individuals with at least One Hypoplasia 70
5-3. Comparison of the Mean (in mm) of Preadult and Adult Hypoplasia Events for Santa Catalina de Guale 73
5-4. Comparison of the Mean Tooth Crown Heights (in mm) for the Preadult and Adult Cohorts from Santa Catalina de Guale 76
6-1. Georgia Coastal Bone Samples for Isotopic Analysis 82
6-2. Interlab Comparisons of Nitrogen Isotopic Analysis 86
6-3. Interlab Comparisons of Carbon Isotopic Analysis 86
6-4. Nitrogen Isotopic Analysis Summary Statistics 87

6-5. Carbon Isotopic Analysis Summary Statistics 87
7-1. Sample Composition 97
7-2. Temporal Differences in Whole Bone Dimensions and Age 100
7-3. Temporal Differences in Midshaft Femoral Cross-sectional Dimensions and Indices—Unstandardized 103
7-4. Temporal Differences in Subtrochanteric Femoral Cross-sectional Dimensions and Indices—Unstandardized 104
7-5. Temporal Differences in Midshaft Femoral Cross-sectional Dimensions—Standardized .. 107
7-6. Temporal Differences in Femoral Subtrochanteric Cross-sectional Geometry—Standardized 108
7-7. Temporal Differences in Humeral Cross-sectional Geometry—Unstandardized 111
7-8. Temporal Differences in Humeral Cross-sectional Dimensions—Standardized 112
7-9. Two-Way Analysis of Variance (Sex, Temporal Period) 114
7-10. Sexual Dimorphism 115
8-1. Size and Composition of Samples from the Georgia Coast 122
8-2. Bilateral Asymmetry in Humeral Length, Total, Cortical, and Endosteal Areas in Males and Females 126
8-3. Bilateral Asymmetry in Bending and Torsional Strengths in Males and Females 128
8-4. Bilateral Asymmetry in T_{ap}/T_{ml} and I_{ap}/I_{ml} in Males and Females 129
8-5. One-Way Analysis of Variance of Bilateral Asymmetry Among Periods Within Sex 129
8-6. Sexual Dimorphism in Bilateral Asymmetry 130

FIGURES

1-1. Processual model of skeletal adaptation and change in the transition from hunting, gathering, and fishing subsistence regime to a lifeway focusing in part on maize agriculture 14
1-2. Map of St. Catherines Island, Georgia, showing location of Santa Catalina de Guale (cruciform) 20
1-3. Map showing location of human remains at Santa Catalina de Guale mission cemetery .. 21
2-1. Pathological modifications of Irene Mound tibiae associated with treponematosis 30
2-2. Irene Mound cranial vault pathological modifications associated with treponematosis 31
2-3. Irene Mound maxillary pathological modifications associated with treponematosis 32
2-4. Irene Mound vertebrae showing pathological modifications associated with tuberculosis .. 32
2-5. Irene Mound innominate showing pathological modifications associated with tuberculosis 33
2-6. Irene Mound ribs showing pathological modifications associated with tuberculosis 34
3-1. Occlusal molar wear schedule 39
3-2. Comparison of molar wear for individuals of 21 and 27 years of age 40
3-3. Seriated dentitions from Santa Catalina de Guale 41
3-4. Survivorship for the precontact preagricultural, precontact agricultural, and contact adult samples 45
3-5. Mortality for the precontact preagricultural, precontact agricultural, and contact adult samples 46
3-6. Probability of dying for the precontact preagricultural, precontact agricultural, and contact samples 47
4-1. Cross-section of tooth showing major anatomical features 51
4-2. Labial surface of permanent right mandibular canine 54
4-3. Comparison of precontact preagricultural, precontact agricultural, and contact individuals affected by hypoplasia 55
4-4. Comparison of precontact preagricultural and contact hypoplasia area 56
4-5. Comparison of precontact agricultural and contact hypoplasia area 57
4-6. Comparison of precontact preagricultural and contact hypoplasia events 58
4-7. Comparison of precontact agricultural and contact hypoplasia events 59
4-8. Comparison of precontact preagricultural, precontact agricultural, and contact frequency (in percent) of total hypoplasia area by age for maxillary central incisor 60
4-9. Comparison of precontact preagricultural, precontact agricultural, and contact mean hypoplasia area by age for maxillary central incisor 61

4-10. Comparison of precontact preagricultural, precontact agricultural, and contact frequency (in percent) of total hypoplasia area by age for mandibular canine 62
4-11. Comparison of precontact preagricultural, precontact agricultural, and contact mean hypoplasia area by age for mandibular canine 63
4-12. Comparison of precontact preagricultural, precontact agricultural, and contact mean frequency and mean width of continuous enamel hypoplasias for each tooth type 64
5-1. Comparison of preadult and adult tooth size differences 70
5-2. Comparison of preadult and adult age distribution of hypoplasia area (mandibular teeth) .. 71
5-3. Comparison of preadult and adult age distribution of hypoplasia area (maxillary teeth) .. 72
5-4. Comparison of preadult and adult completeness of dental samples 75
6-1. Graph showing values expected theoretically in human bone collagen from each of three diets 85
6-2. $\delta^{15}N$ and $\delta^{13}C$ values for the preagricultural sample (Refuge-Deptford and St. Catherines periods) and the agricultural sample (Savannah and contact periods) 89
6-3. $\delta^{15}N$ and $\delta^{13}C$ values of the two samples from the preagricultural periods (Refuge-Deptford and St. Catherines) compared with the values from a sample of Eskimo from a previous study 90
6-4. $\delta^{15}N$ and $\delta^{13}C$ values of the sample of precontact agriculturalists from the Georgia coast (Savannah period) and the contact period agriculturalists from St. Catherines Island compared with a sample of Pueblo agriculturalists from a previous study 91
7-1. Diagrammatic example of the effects of subperiosteal and endosteal expansion on geometric properties of long bone sections 96
7-2. Locations of femoral (top) and humeral (bottom) sections included in the study 98
7-3. Temporal changes in femoral length′ 101
7-4. Temporal changes in humeral length′ 102
7-5. Temporal changes in I_x/I_y, the ratio of anterior-posterior (A-P) to medial-lateral (M-L) bending strength, of the midshaft section of the femur 105
7-6. Temporal changes in I_{max}/I_{min}, the ratio of maximum to minimum bending strength, of the subtrochanteric section of the femur 106
7-7. Temporal changes in cortical area (CA) of the midshaft section of the femur, standardized over (bone length′)^2 (and multiplied by 10^5) 109
7-8. Temporal changes in polar second moment of area (J) of the midshaft section of the femur, standardized over (bone length′)^4 (and multiplied by 10^8) 110
7-9. Temporal changes in polar second moment of area (J) of the midshaft section of the humerus, standardized over (bone length′)^4 (and multiplied by 10^8) 113
7-10. Sexual dimorphism in two measures of relative A-P to M-L bending strength of the midshaft of the femur, [(male-female)/female] × 100 116
8-1. Location of humeral section used in this study. See text for definition of length′ 123
8-2. Scatterplot comparing radiographically estimated and directly measured cortical area (CA) (in mm^2) 124
8-3. Scatterplot comparing radiographically estimated and directly measured polar second moment of area (J) (in mm^4) 125
8-4. Schematic depiction of overall temporal changes in relative subperiosteal (TA), cortical (CA), medullary (MA) areas, and polar second moment of area (J) in right and left sides 127
8-5. Temporal comparisons of differences in cortical area (CA) in males and females 130
8-6. Temporal comparisons of differences in polar second moments of area (J) in males and females 131
